

THE UNIVERSITY OF TRINIDAD AND TOBAGO

PROFESSIONAL EDUCATION UNIT (PEU) GLOBAL DEVELOPMENT SERIES BASIC PETROLEUM TECHNOLOGY

OUTLINE:

Basic Petroleum Technology, in its five-day format, is designed for non-technical personnel and managers, and presents a practical understanding of petroleum industry technology in an interesting, effective, and efficient manner. Included are the basics of the industry from terminology through basic technology and from geology through processing of the petroleum product. The course emphasis is on "understanding" the technology.

OBJECTIVES:

At the end of this course, participants should be better able to:

- Discuss basic geology as related to oil and gas reservoirs.
- Explain reservoir fluid and rock properties.
- Discuss the basics of seismic technology.
- Describe reservoir definition and development; production and recovery.
- Explain the fundamentals of drilling, well completions and production operations.
- Discuss the basic concepts of primary and enhanced recovery operations.
- Explain surface operations.
- Understand the terminology of exploration and production (language of the oil field).

DESIGNED FOR:

Secretarial, administrative, management, field support, accounting, purchasing, economics, legal, finance, human resources, drafting, land and data processing personnel, as well as investors and royalty owners.

DURATION:

AUGUST 24 - 28, 2009
